

REDUCE YOUR ENVIRONMENTAL FOOTPRINT

Choose HVO biofuel for the transport
of your PAM products

REDUCE YOUR ENVIRONMENTAL FOOTPRINT

Acting on climate change requires decarbonization of our economies, i.e. the reduction of greenhouse gas emissions (GHG), including CO₂. Transport makes up a significant part of GHG emissions: in France, it contributes up to 31% of emissions in 2019 ⁽¹⁾.

Faced with this challenge, Saint-Gobain PAM Canalisation is taking action to reduce GHG emissions from its transports and helps its customers **to reduce their own carbon footprint with the Blueway Transport offer.**

FOCUS

Blueway Transport is part of Blueway by PAM, a range of solutions to help our customers reduce their environmental footprint.

Blueway Transport: low emissions transport

Blueway Circular: management of packaging items and cast iron cuts from construction sites (available in certain countries, get in touch with us for details).

As part of Blueway Transport, Saint-Gobain PAM Canalisation offers its customers a transport solution with trucks running on HVO biofuel, as an alternative to traditional fuel.

A biofuel from the circular economy

HVO is a second generation biofuel as it is manufactured from the reprocessing of waste (cooking oils, residual oils etc.). As a circular economy product, it does not compete with the food production.

Biofuels contribute to the reduction of greenhouse gas emissions as the CO₂ released during combustion is offset by the CO₂ absorbed during the growth of the plants from which they are derived.

HVO helps to reduce CO₂ emissions by more than:

83%²

OPT FOR BLUEWAY BY PAM

Saint-Gobain PAM Canalisation is forging partnerships with road hauliers to manage a fleet of trucks which run on HVO biofuel.

The quota of tonnes of PAM products transported by these vehicles is offered to customers concerned about reduce their carbon footprint.

To benefit from this offer:

A simple operation:

1

For delivery of your project, ask for the Blueway by PAM (HVO) offer

2

PAM delivers your project

3

Receive your "Attestation of Emission Reduction"

This offer was made possible with the support of a firm specializing in environment and sustainable development.

Choosing Blueway Transport is:

- To demonstrate a strong commitment to reduce your carbon footprint: with HVO biofuel, CO₂ emissions are reduced by more than 83% ⁽²⁾.
- To demonstrate and quantify your actions with the «Attestation of Emission Reduction» issued by Saint-Gobain PAM Canalisation.

Want to take action to reduce your environmental footprint?

Contact your local PAM sales team for more information on Blueway by PAM.

FOCUS

THE ATTESTATION OF EMISSION REDUCTION

It mentions:

- tonnes of CO₂ not emitted
- the percentage of CO₂ reduction compared to diesel.

Attestation de réduction d'émissions		PAM SAINT-GOBAIN	2007/0002
		Nom client	Chantier concerné

NOTRE ENGAGEMENT :
Contribuer activement à protéger notre planète en nous engageant dans la réduction de nos émissions avec notre offre Blueway HVO.

Croiser Blueway HVO c'est valider pour un projet nos émissions de CO₂ devenant à l'année par an, soit l'équivalent :
✓ De X camions diesel sur ce projet.

Service de transport	Emissions en amont	Emissions de combustion
Activité	Emissions du carburant standard de référence : 1000t	Emissions du carburant standard : 1000t
Nombre de km :	Période :	Emissions du transport : 1000t
Bio-carburant utilisé : HVO	Emissions de bio-carburant : 1000t	Réduction : 1000t / % de 1000t
Quantité de bio-carburant allouée :	Réduction 1000t / % de 1000t	

HVO est un carburant de seconde génération issu du traitement de déchets (huiles de cuisson, huiles résiduelles etc.).

Cette offre permet de participer activement à la décarbonation du transport et ainsi réduire de manière significative les émissions de gaz à effet de serre.
